Q, Z © 1996-2015, Amazon.com, Inc. or its affiliates Wednesday, January 10, 2007 Zhida Tongbao It is probably my favorite yuan dynasty coin, a rare special issue that has an obverse inscription in four different scripts. This particular example, with two phoenixes on the back, sold in China recently for RMB55,000 (nearly \$7,000) [another example]. It is also a rather enigmatic coin, with different sources providing different explanations of the scripts and their meaning. In the auction catalogue of this coin is described as entered in the transcription of the standard coin formula Zhizhi Tongbao 至治通寶, that is, a monetary coin from the period Zhizhi (1321-1323), reading from top to bottom and from right to left. This is the most common interpretation, but the inscription has also been interpreted as reading Zhiyuan Tongbao 至日卜通寶, that is, a monetary coin from the Zhiyuan period (1264-1294 or 1335-1340), because some examples of this coin have the inscription Zhiyuan Tongbao 至通寶 Chinese characters on the back. It is also less often interpreted as reading Zhida Tongbao 至通寶, a monetary coin from the Zhid period (1308-1311). Everyone agrees on three words, but the lower character causes a lot of confusion, and his script is variously described as Phags-pa, Tibetan, Uighur-Mongolian or Khitan. I don't think it's any of these scripts, and I think reading Zhida Tongbao 至通寶 is correct. Zhi 至 The most important word is not problematic. It is clearly written in the Phags-pa script and reads ji □□, corresponding to the Chinese zhi 至. Da-ja for a long time I was embarrassed by the word at the bottom of the coin, but recently I looked again at the table of Sanskrit letters given by Tao Zongya 陶宗i in his work on scripts and calligraphy, Shushi Huiyao -會要 (mid-14th century, but based on previous work), and it was obvious that the letter was in fact a corruption of the tha letter in the Lants script. If you look at the 2 letter down in the 4th column on the right you can see tha list, with chinese phonetic gloss tà 撻. It is clearly the same letter as on the coin, but on the coin the upper loop of the letter is incorrectly written so that it does not connect. Letter tha is not an expected transcript of the Chinese Yuan dynasty da 大, which is written tay □□ in Phags-pa, but perhaps close enough for someone who was not qualified in the pronunciation of Sanskrit In justice, I must add that in the examples of this coin from Zhiyuan Tongbao 至通寶 in Chinese characters on the back, the letter at the bottom has additional jump levels not seen in this example , but I think it must be a later, further corruption of an unknown letter. Tong 通 The word on the right is apparently a transcription of 通 tong in the Uighur Arabic script (also known as the Chaghatayid script), but unfortunately I have absolutely no reading Arabic in general, so I do not know how exactly the pliers is prescribed. If anyone can provide a Transcription of Unicode words on coins I would be very grateful. Bao 寶 Word on the left is the figure of Tangut □ (Xiahan Zidian #0999, Wenhai Yanjiu #4718). In the 14th century, tangut sea of characters is glossy as meaning wave (Chinese because 波), and Li Fanwen gives the character a reconstructed pa pronunciation in his Tangut dictionary, so it's probably a phonetic loan designed to represent the Chinese bao 寶. Oddly enough, this is not a Tangut character used to 寶 bao in Western Xia coins with the words Tangut (□). Last modified: 2017-01-01 (updated with Unicode Tangut characters) If tangut characters are not displayed correctly, download and install the Tangut Yinchuan font.
